

Business Intelligence Leader

This is a brilliant opportunity to use your honed technical leadership skills and develop a new, vibrant team. A chance to make your mark in a high profile green fields organisation. An excellent position to be able to make changes within a dynamic business.

A multi faceted organisation working on large, complex projects within Auckland. An environment where change of direction can happen overnight.

We are looking for a technical Business Intelligence Lead to lead the BI delivery team to design and implement software and systems. You will develop, coach and motivate the team to deliver effective and efficient services. Direct, organise and lead projects in the implementation and use of new BI software tools and systems.

You will be responsible for leading the development and deployment of BI projects across the business, full documentation process, analysis, methodology, assist with data warehouses, and training while supporting and mentoring a team.

In this role you will need to have the below attributes to be successful:

- A minimum of 5 years experience in Business Intelligence ideally in a highly complex organisation
- Proven experience in leadership of a data warehouse environment
- Demonstrate a disciplined approach to managing a significant budget
- Can delegate and empower others
- A motivated and driven personality with excellent leadership and communication skills
