

Java Developer

- Great opportunity to work within a complex business environment
- CBD location
- Bleeding edge technologies
- Respected, large enterprise organisation
- Minimum 3 years industry experience using Java
- Excellent salary offered

My client is seeking an experienced Java Developer with a proven work history of at least 3 years in a commercial environment.

This role is primarily tasked to develop key projects within the business and provide support based on functional requirements. Programming experience is essential using JAVA, Grails would definitely be advantageous as would knowledge around databases and other web applications.

In order to succeed in this business this role requires the following:

- High analytical, conceptual and problem resolution skills
- Exceptional written and oral communication
- An understanding of business and the integration of technology
- Great interpersonal skills when dealing with a diverse range of people
- Proven experience in application maintenance and deployment
- Excellent documentation skills
- Working knowledge of hardware and network architecture
- Experience in agile software development methodologies and testing processes

In return our client offers an excellent salary range and the opportunity to work with cutting edge technologies. An excellent business to be involved in, offering ample career opportunities.
